

## Airmeet Tips and Tricks

### *Before the event*

**Download Google Chrome:** Airmeet requires using a laptop/desktop computer and the most up-to-date version Google Chrome browser for optimal performance. If you need to download Google Chrome, visit <https://www.google.com/chrome/browser/>.

**Register with Airmeet:** Before you attend your first meeting in AirMeet, you need to register and create your profile.

We strongly encourage you to add a photo to your profile.

**Get comfortable with Airmeet:** If you are new to Airmeet, we highly recommend you review the [step-by-step guide](#) and watch the helpful 5-minute [video walkthrough](#) to learn more about what to expect when you attend a virtual event hosted on Airmeet.

If you plan to share your screen at the table, make sure that you enable permissions in your system preferences if you are using a Mac OS: <https://help.airmeet.com/338/how-to-share-screen-in-mac-os-in-airmeet>. This is good to check before the event because if you do need to enable permissions, it requires you to restart Chrome.

### *During the event*

**Log in to Airmeet:** Join the event using the link sent to you via email.

If you are sitting by yourself at a table, the video chat will start automatically when someone joins you. Each time you join a table, your mic will be automatically muted and your camera will be automatically turned off, so just be sure to toggle them both back on before you start interacting with your table mates. You'll see the Camera and Microphone icons at the bottom of your video chat screen, which will be red when turned off.

**During the sessions,** you will automatically enter the presentation after the 10-second countdown. When the session ends, you will go back to the Social Lounge until the next session.

**View the full [step-by-step guide](#) for Airmeet attendees.**
